

“Design is not how it looks and feels like, Design is how it works”

- Steve Jobs

Design ↗ ×

Implementation

Playbook

Objective: To Design, Develop and Deliver with seamlessly with minimal errors and keeping all departments in loop.

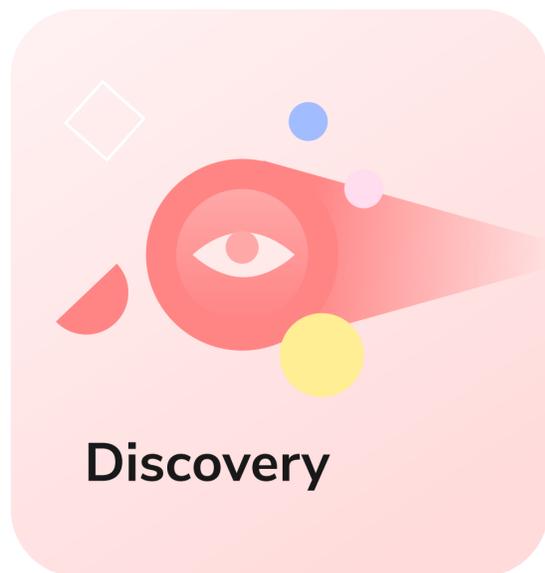

This is a process doc that identifies Touch points in the Design implementation cycle. It bridges the gap between various Departments and enables smooth transition and Delivery.

4 Phased Implementation Cycle

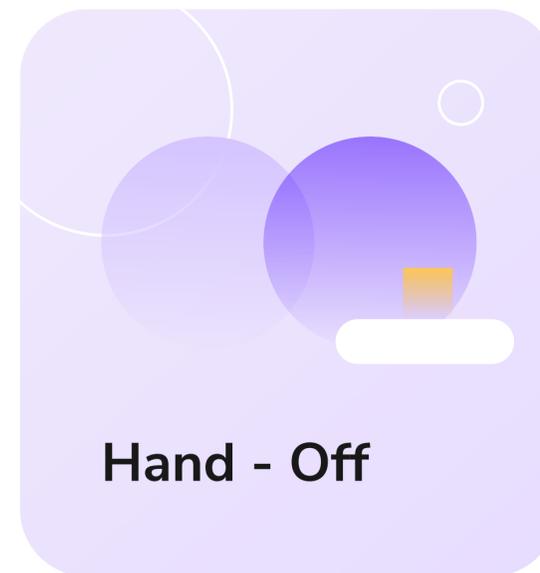

Discovery

A layered approach to create Conceptual Models

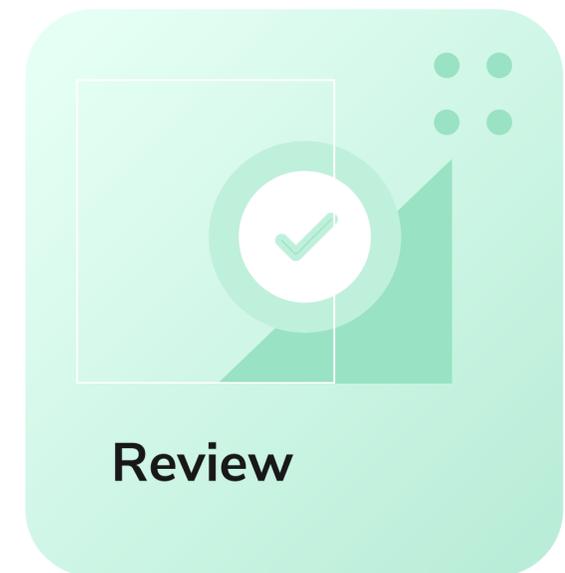

Execution

This phase covers extending the Discovery phase.

Hand - Off

The Design is handed off to Development in Agile manner

Review

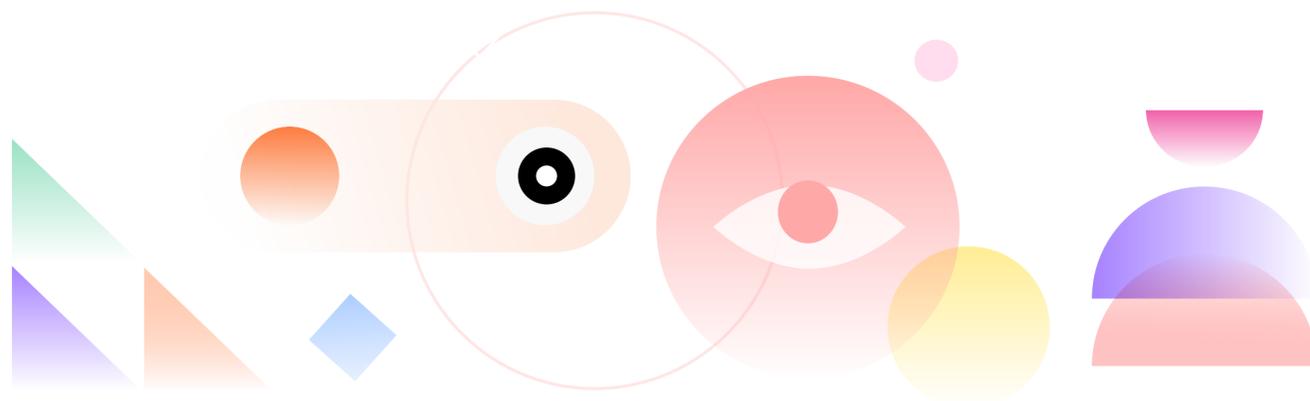

Multiple Design Review rounds happen at this stage,

Discovery

The Discovery is a layered approach to create Conceptual Models to Match te User's mental model. We also make sure that the Conceptual model matches the Business goals.

It starts with rough sketches and becomes better at each Test and Validation level. At the end, we have major Design that's cloder to the version that both Users and the Stakeholders want, ready for Design Execution.

Major features and main screens are identified at the end of this.

Discovery: Layer 1

Designer

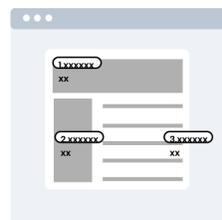

START

Design Team or Designer starts with the Discovery Phase as the first step in the Handoff process

Create Wireframes

Step 1
Low fidelity wireframes
Create low fidelity wireframes — Module wise for the entire scope of the application

Step 2
Annotate
Introduce WF description along with wireframes

Step 3
Map design with story
Map the design (page-level) with High-level User Stories (or Epic) and document in the WF

Validate Wireframes

Lead Dev **Project Consultant/BA** **Project Manager**
He/She can be a Person who have answers or knows everything about the project

Step 4
Validate with team
Validate the wireframes internally with PMs, BAs & Lead Devs.

Clients /Stakeholders

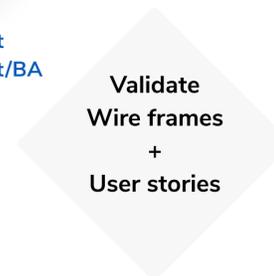

Step 5
Prototype & Validate
Prototype and validate the wire frames with the client stakeholders.

Step 6
Document Userstories
BA Documents the Users Stories

Project Consultant/BA

Step 7
Validate the stories along with wireframes with the client stakeholders

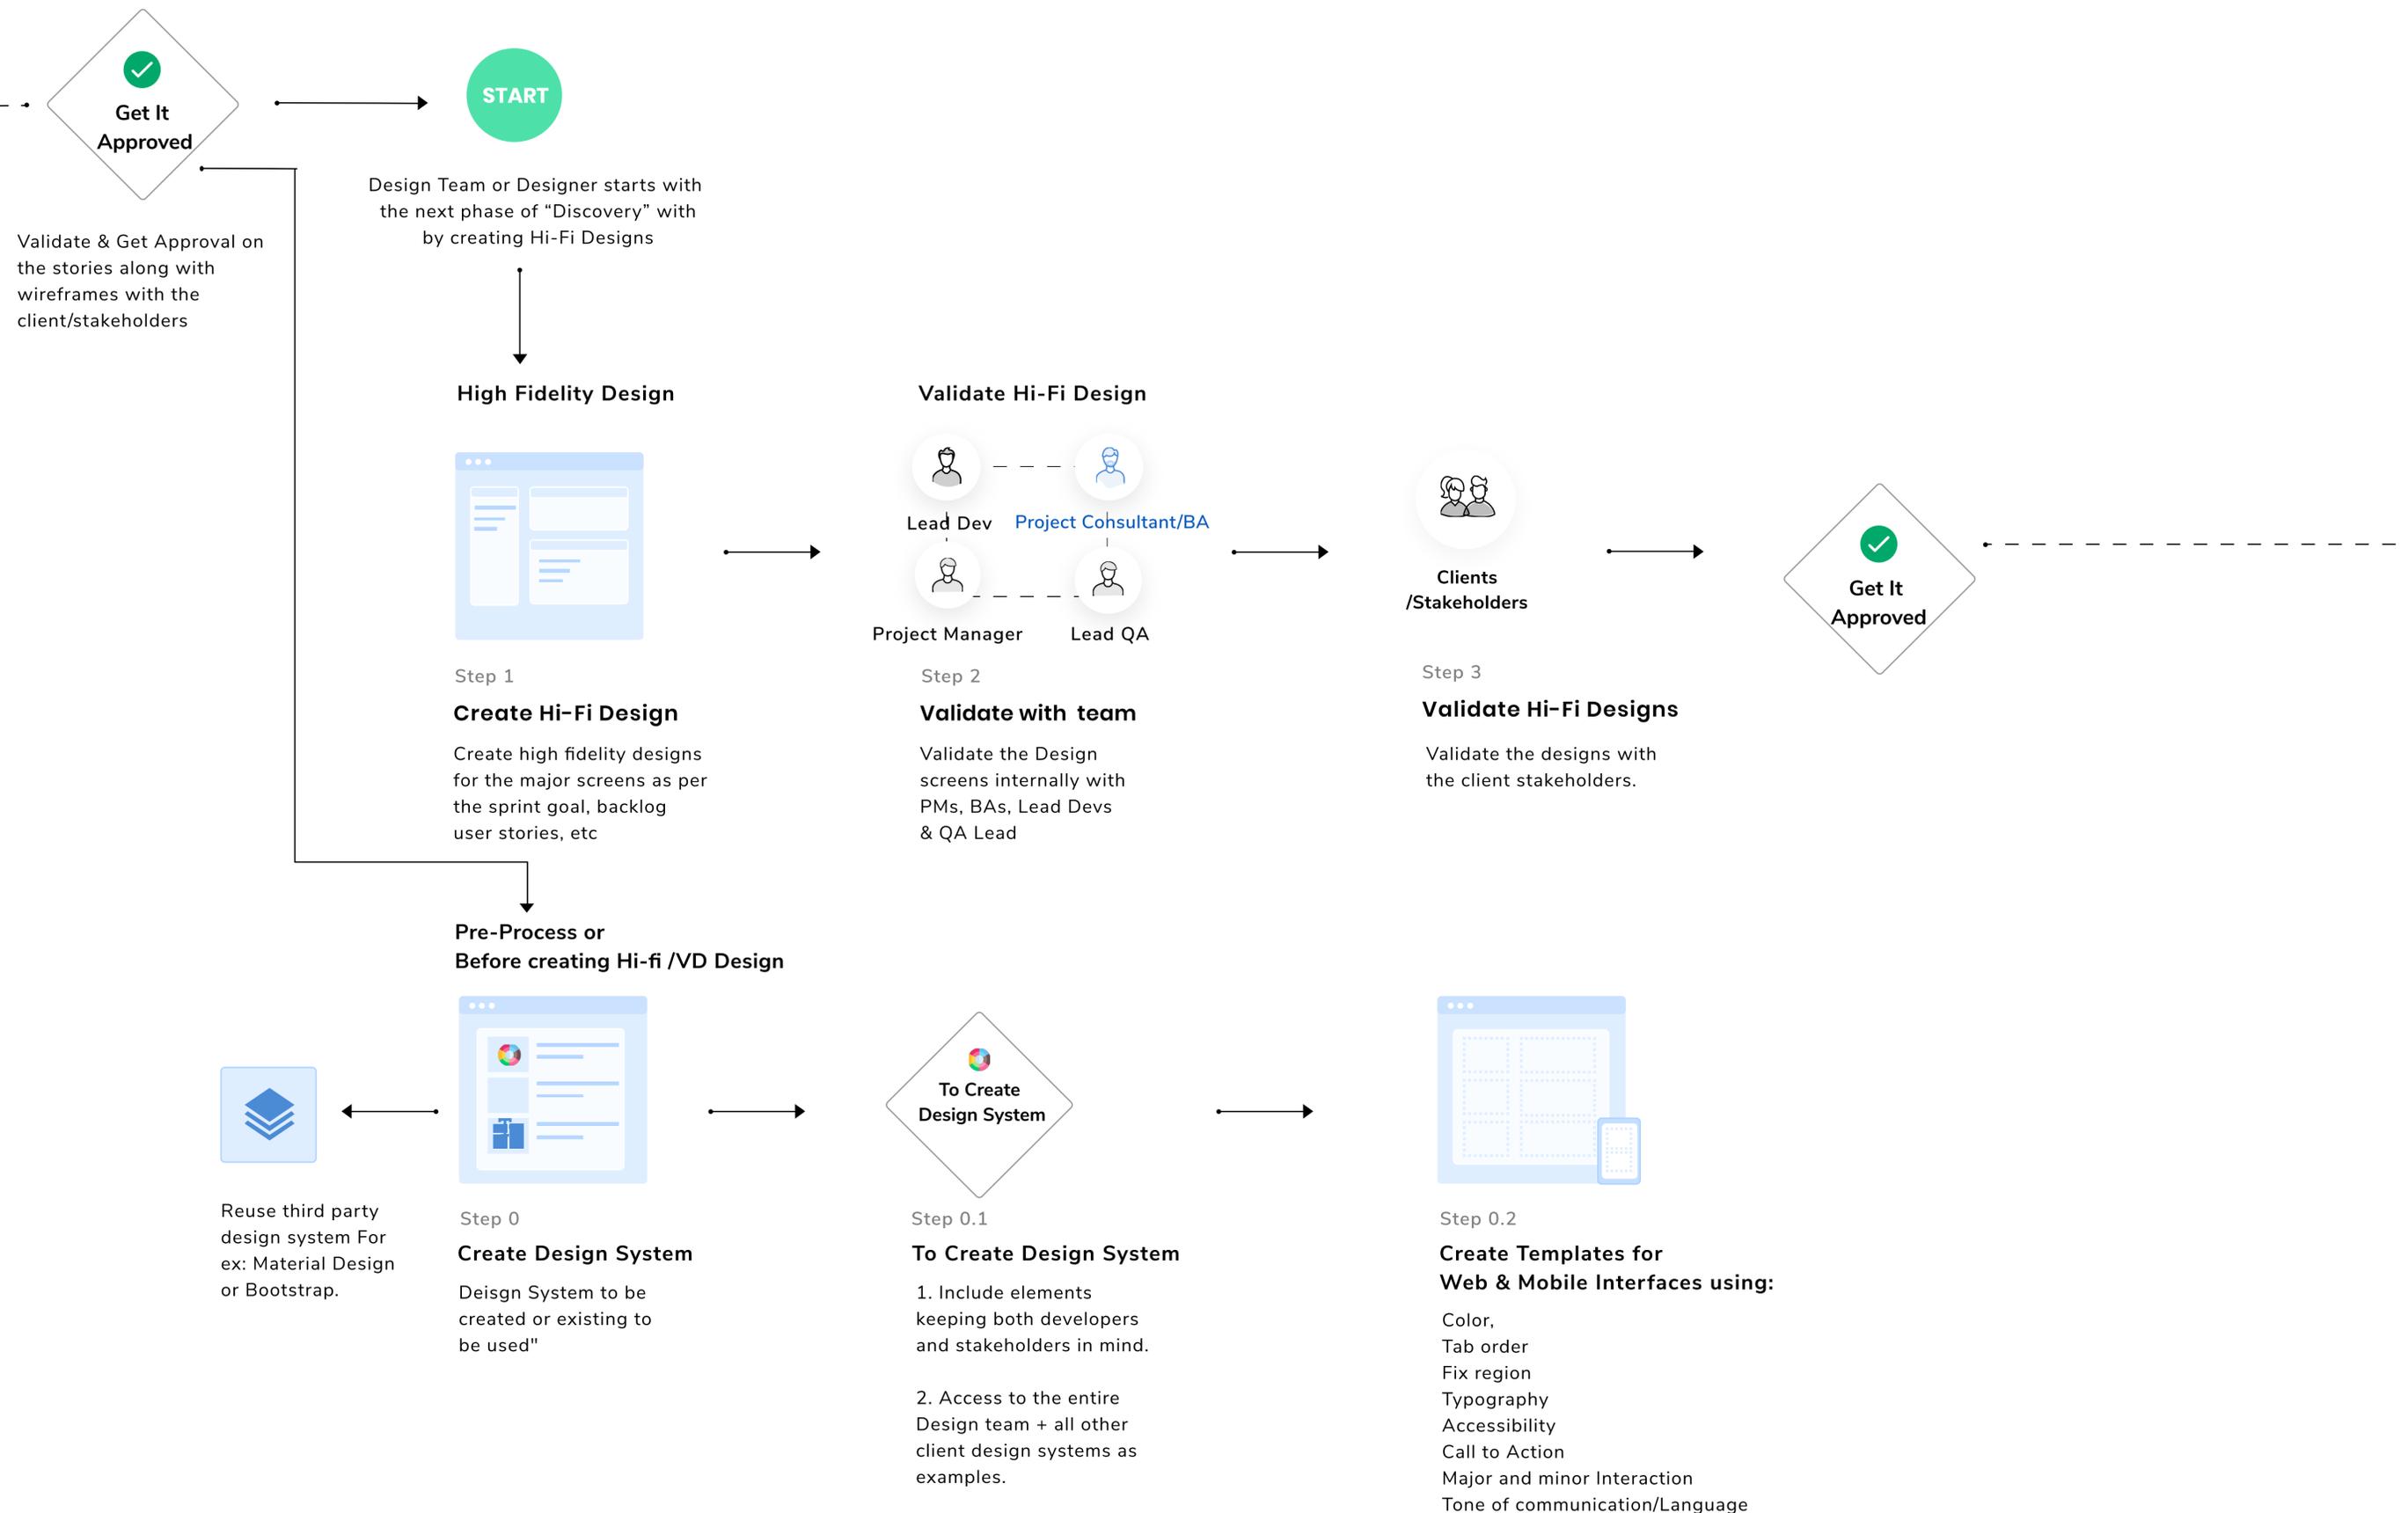

Designer

Clients /Stakeholders

Discovery: Layer 2

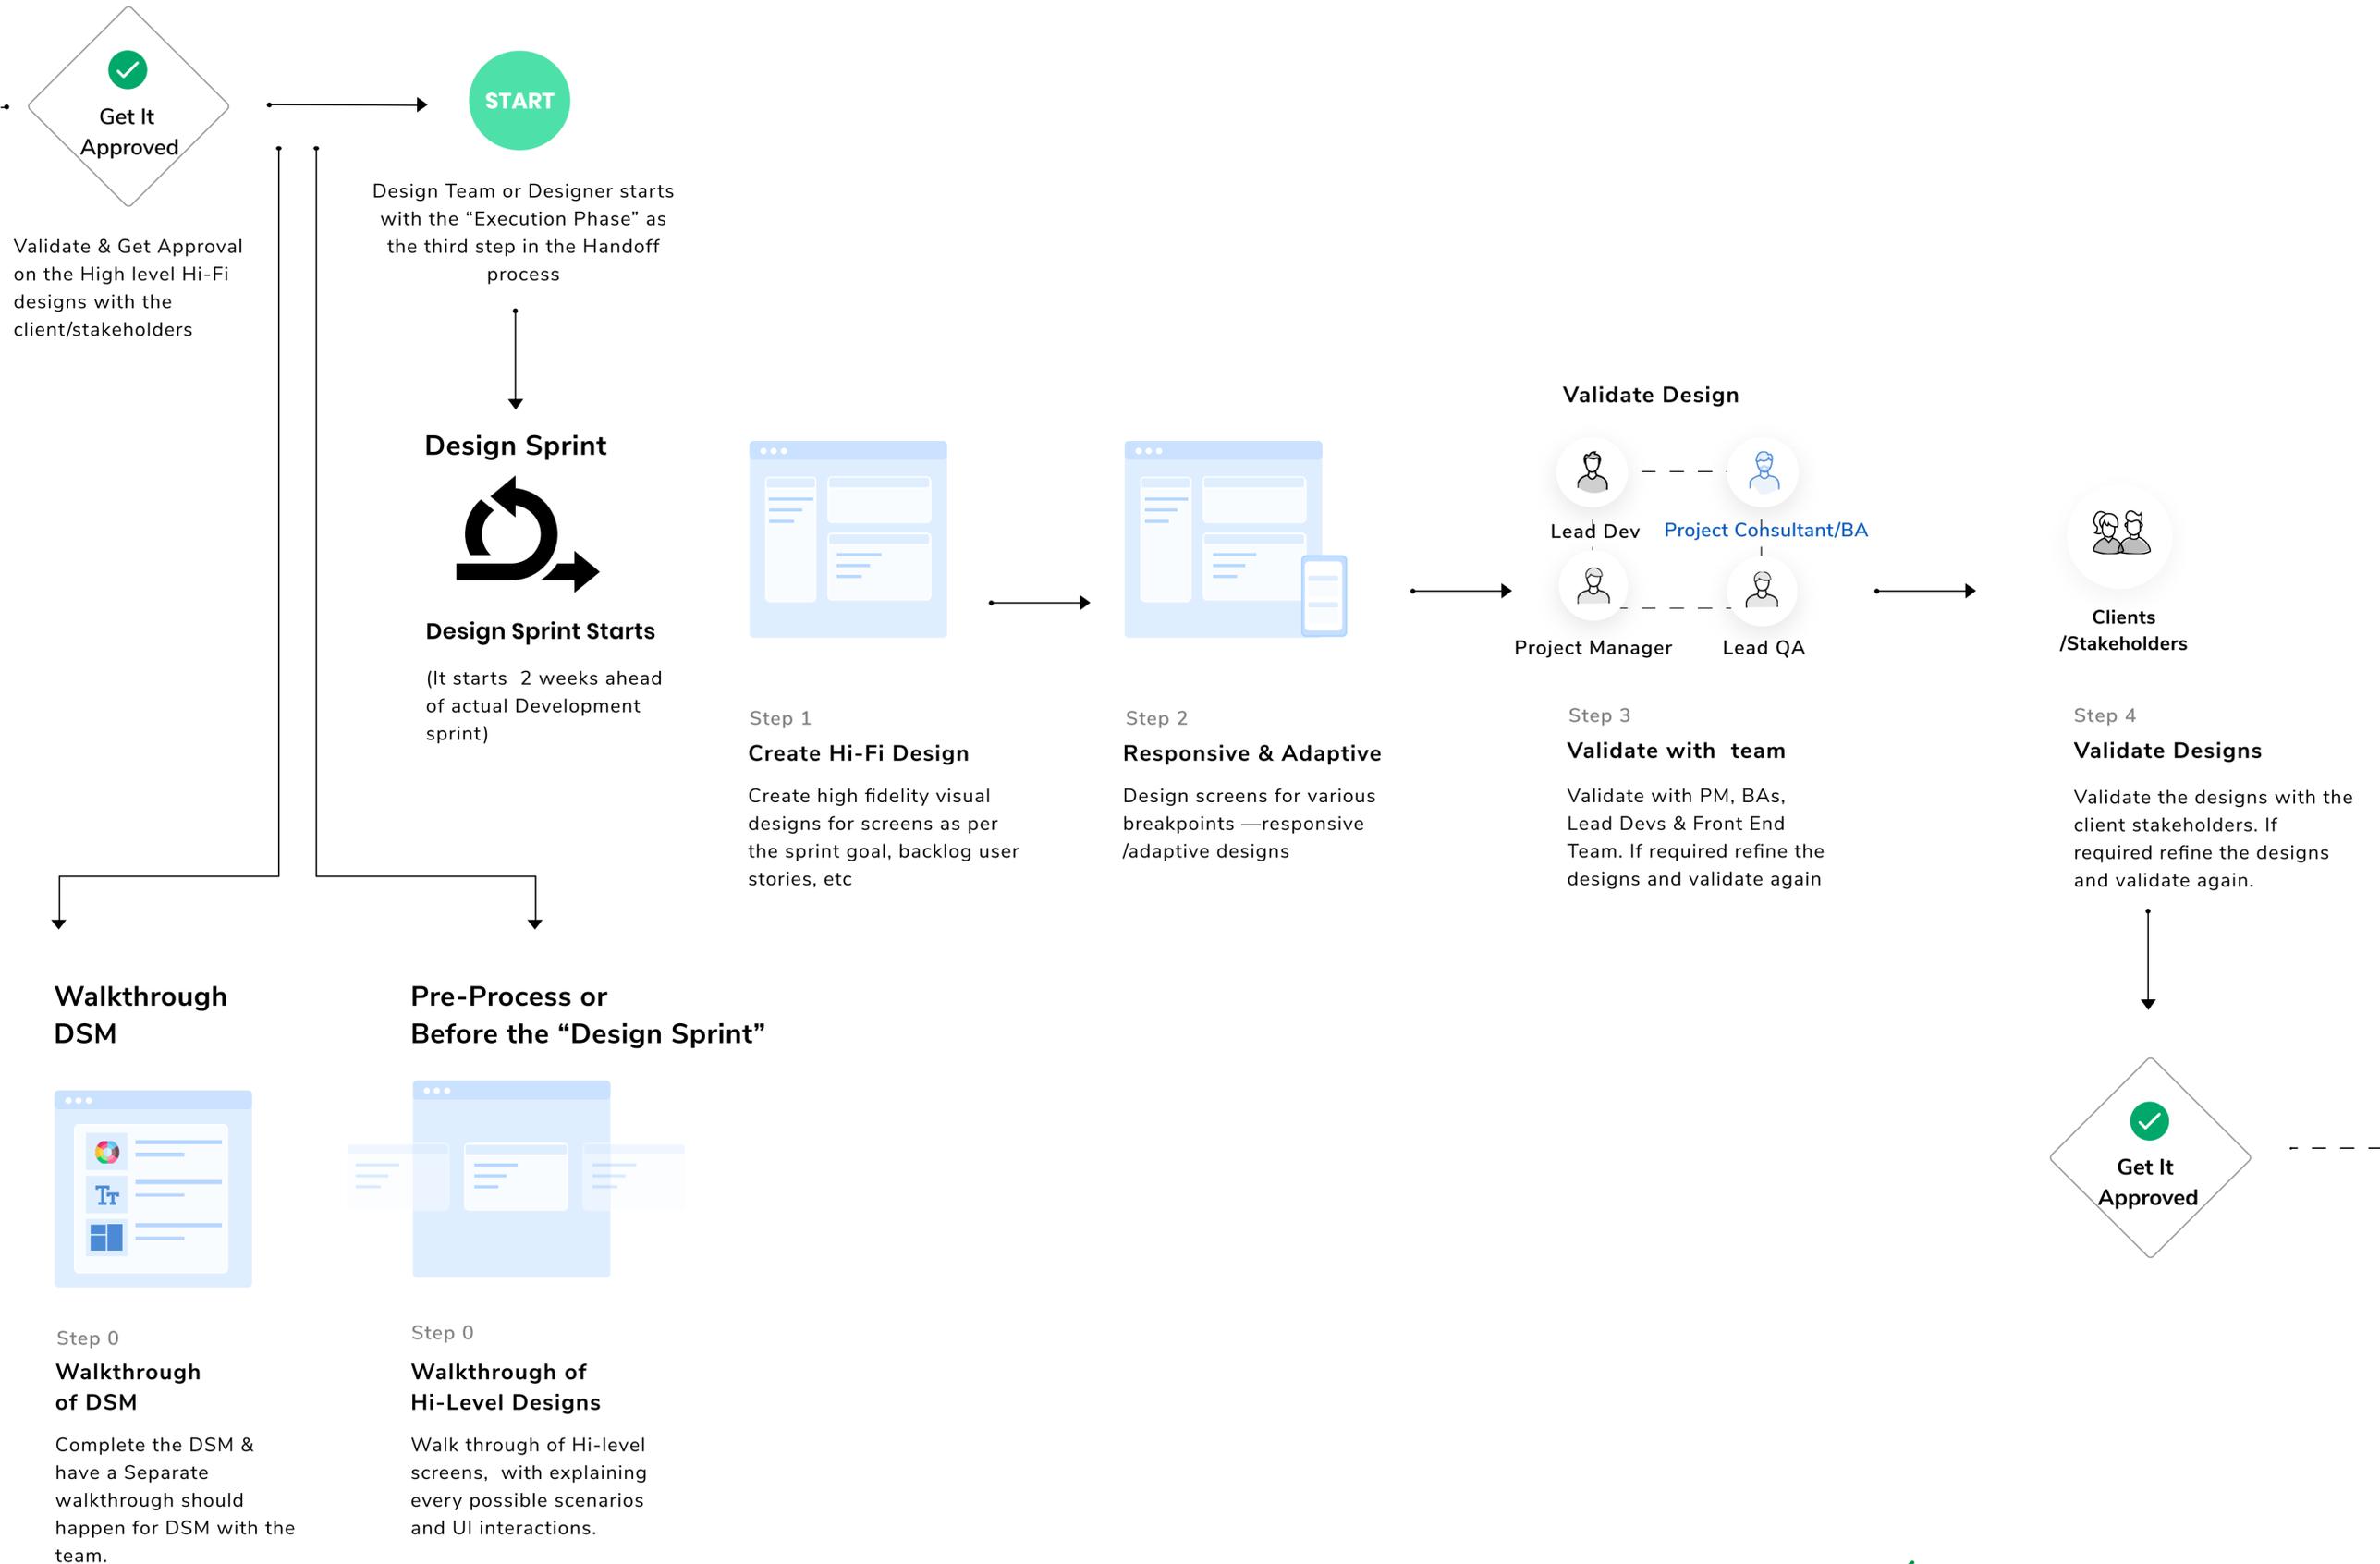

Execution

This phase covers extending the Discovery phase. Design sprints are formed and remaining Features are designed according to the plan.

Execution: Layer 2

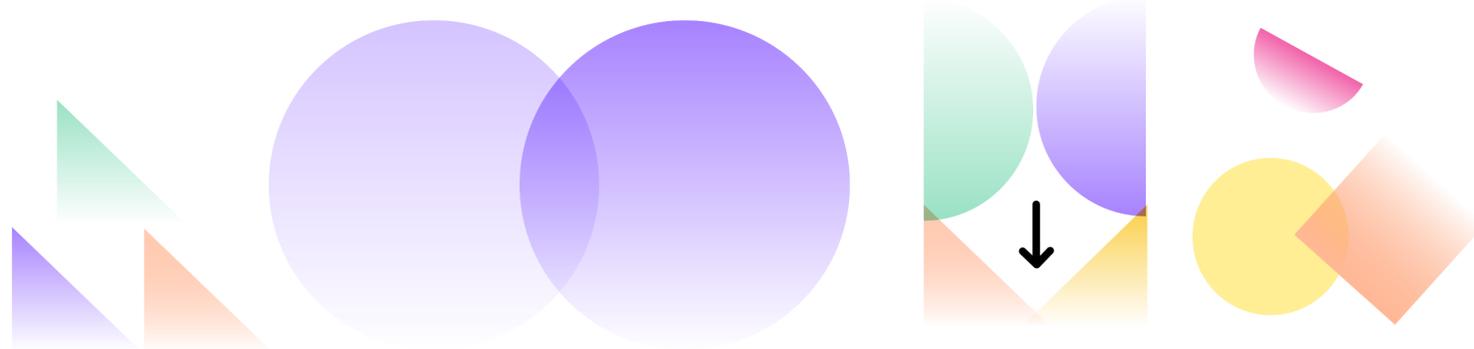

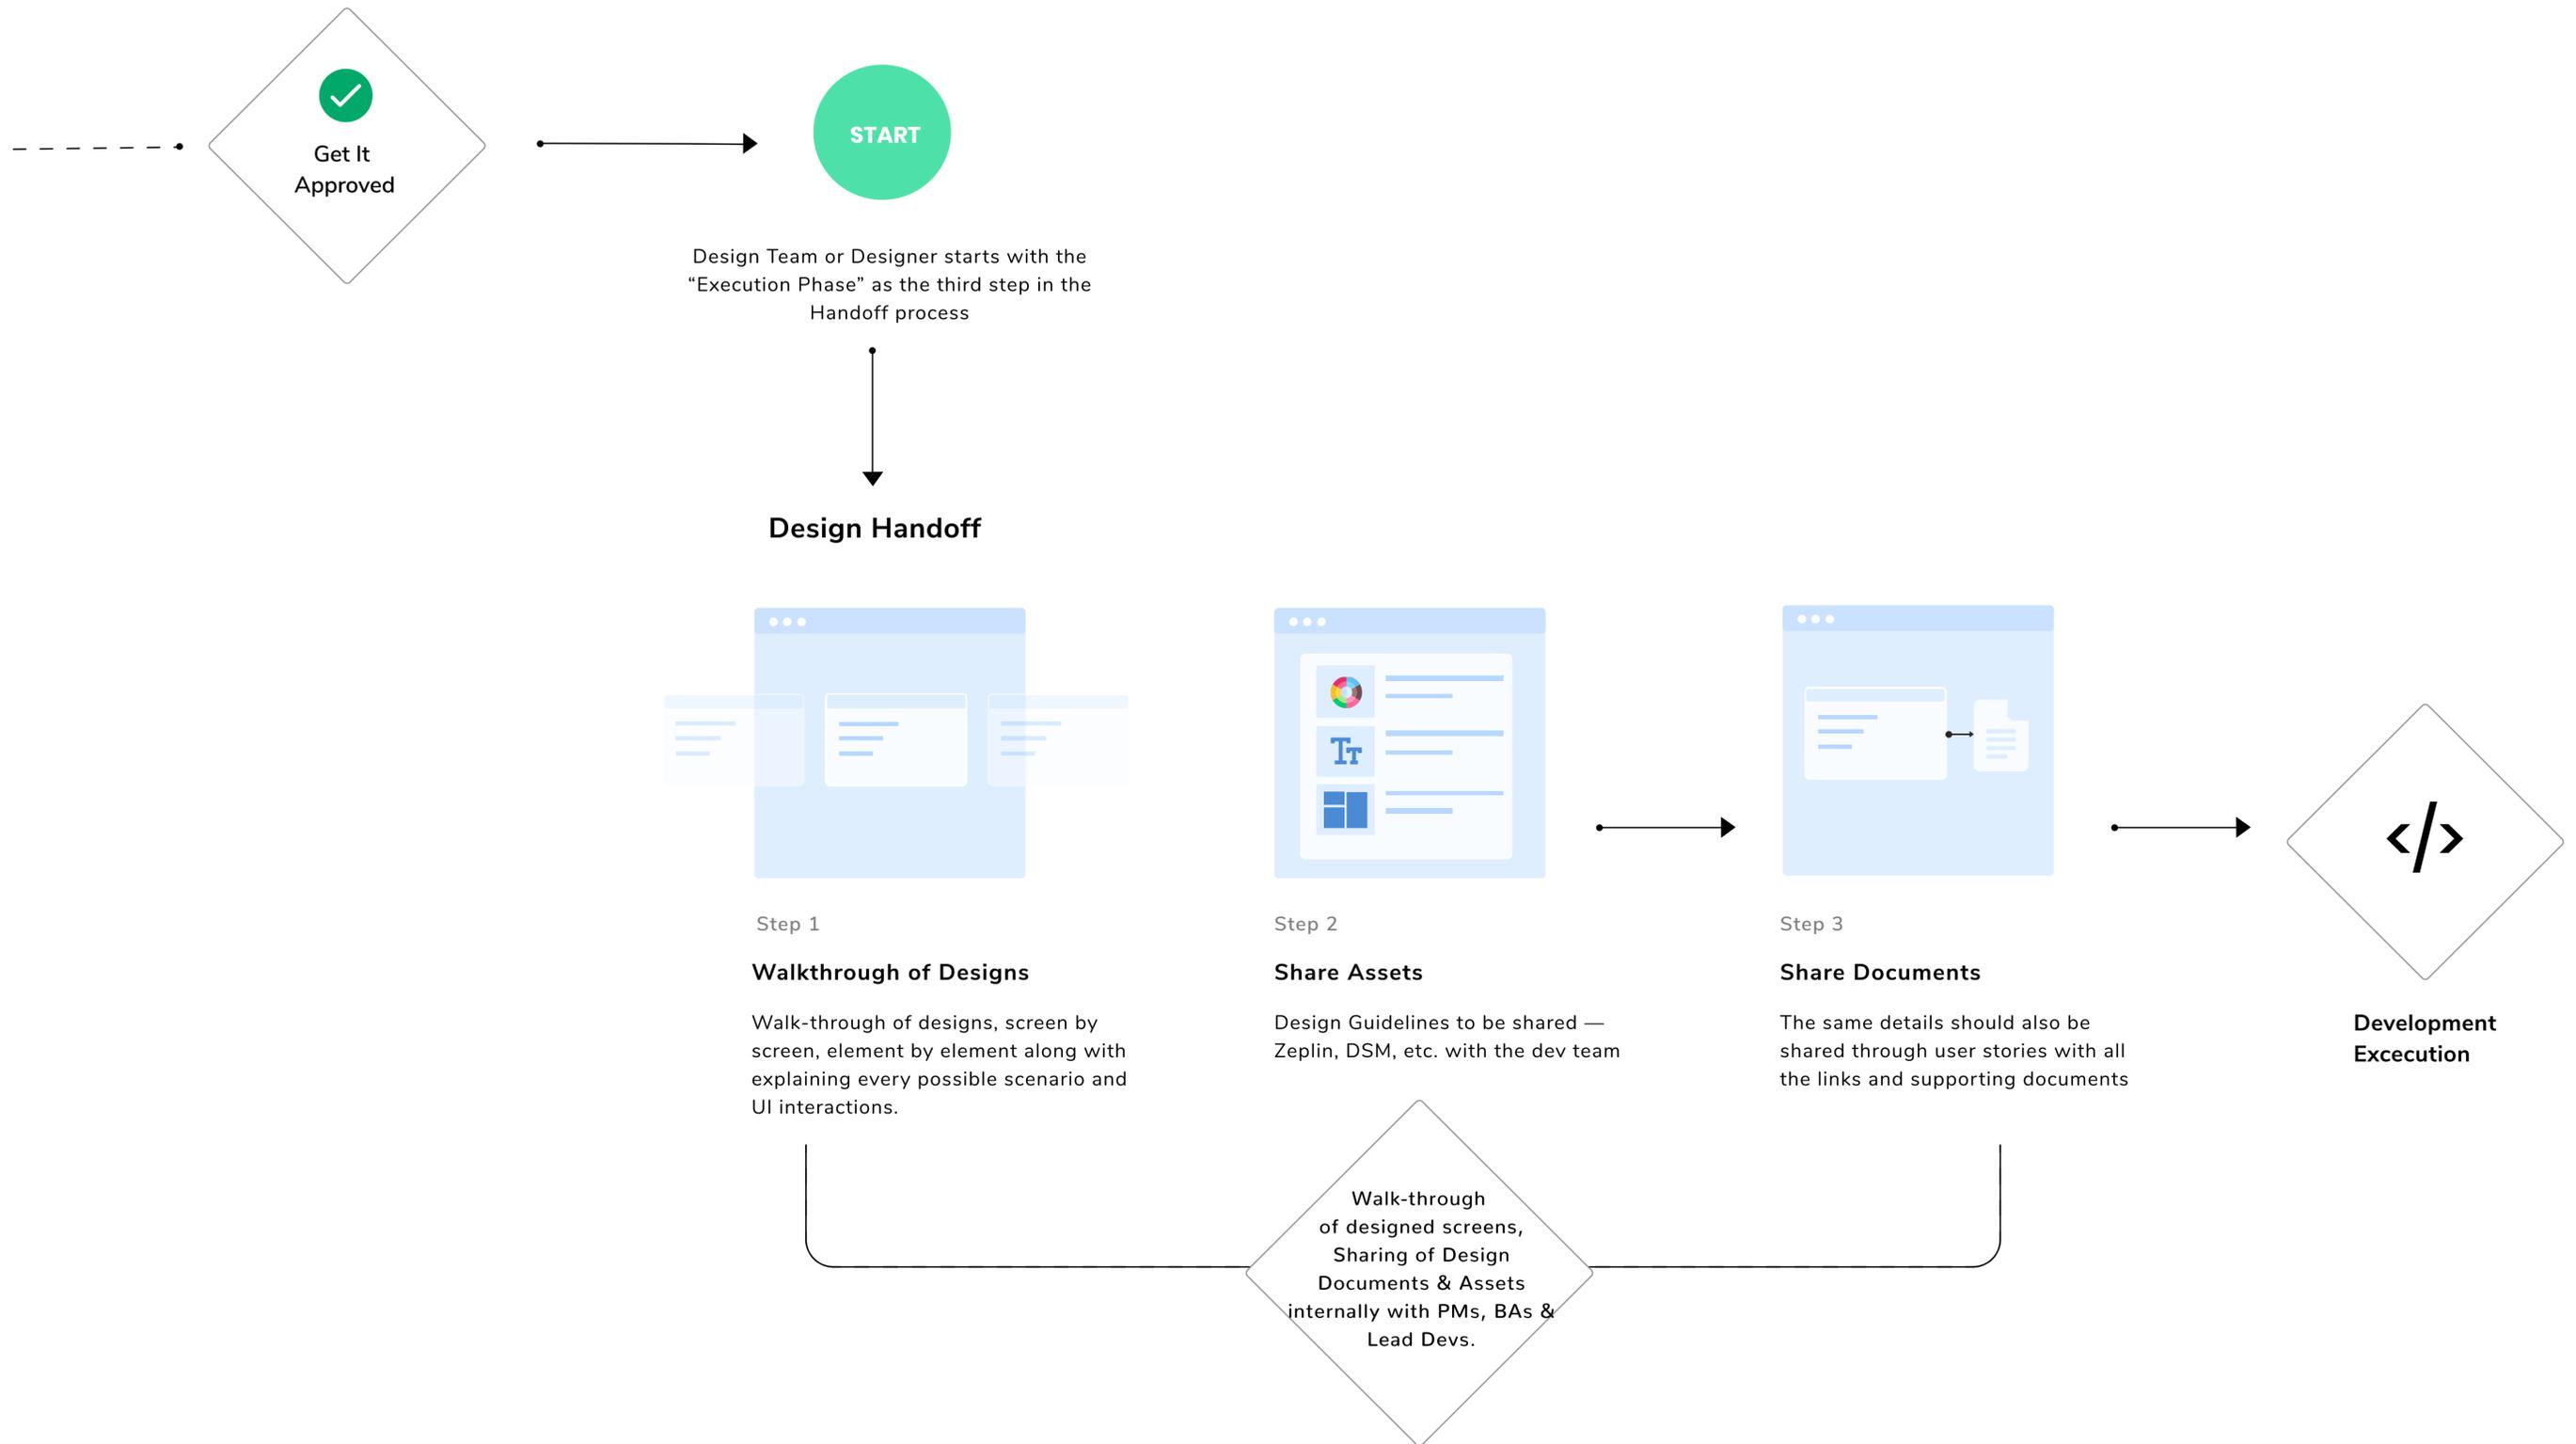

Handoff

The Design is handed off to Development in Agile manner after each Design Sprint with multiple stakeholders involed and signoffs. Validation is repeated again at this stage to iron out missing scenarios and address development roadblocks.

Design iteration can also happen at this stage to ensure the Design also meets development goals along with User and Business goals, keeping the constraints in mind.

Dev Handoff

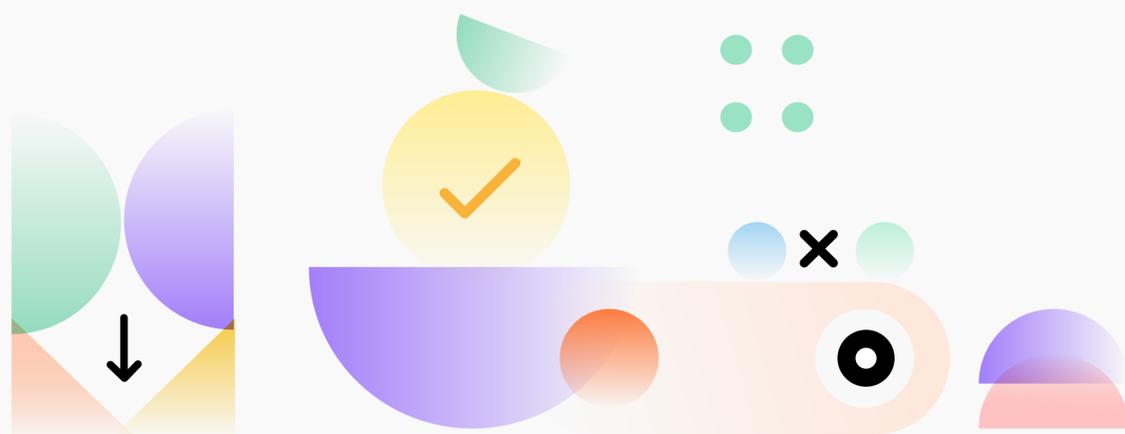

Review

Multiple Design Review rounds happen at this stage, to ensure Design matches the Development.

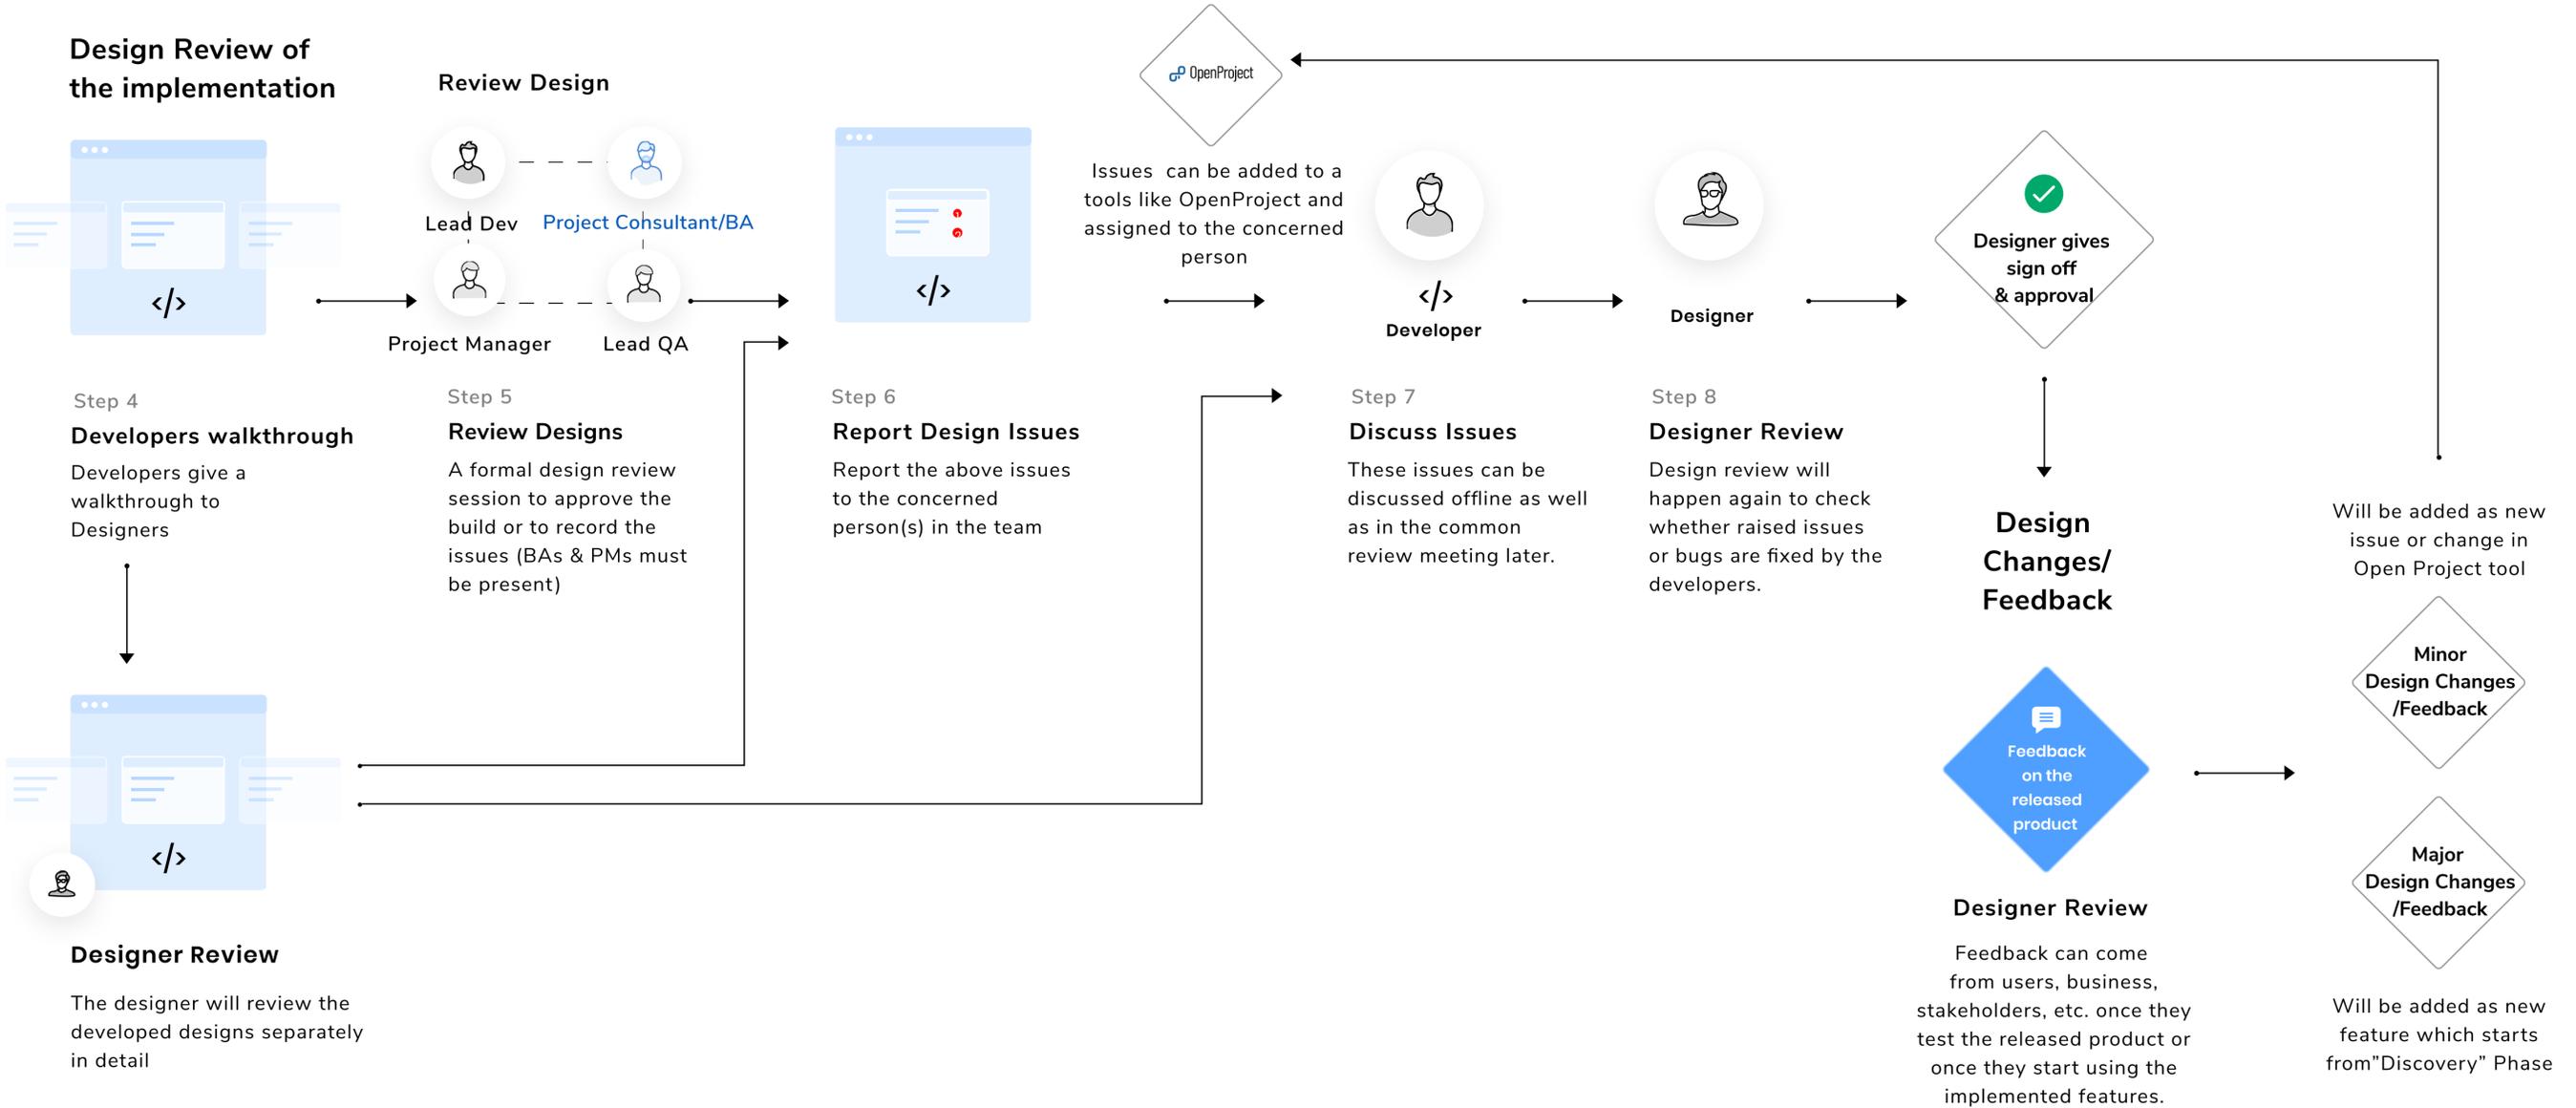

This is followed by iteration if required at both Design, Development level, and reviewed again.

Review

Design Review of the implementation

Delivery

After all successful reviews, final changes are shipped to the Market.
